

## The Perfect Lawn Protocol

### Mix Four Liquid Solutions in Water:

If you use granular, you may continue doing so.

**TERRAIN**

- Adds Foliar Fertilizer (14:2:2)

**ENDURANT**  
TURF COLORANTS

- For Instant color

**SoilPlex**  
Natural Organic Soil Conditioner

- For Humic Acid & Carbon source

**DURATION**  
Soil Surfactant

- Wetting agent

**Just a little of each goes a long way.**

### From Dry Patchy Lawns, Heat Stress, Drought & Hot Spots to the Perfect Green Lawn

The Perfect Lawn Protocol can be modified slightly for any grass species to get your ideal color. Common choices are **Endurant Perennial Rye** for warm season grasses and **Endurant Flex** or **Endurant Fairway** for bermudagrass and cool season species.

**Geoponics Protocol**, or the **Geganics Program**, offers instant gratification of green grass immediately upon using **Endurant Turf Colorants**. Then, by mixing in **Grizzly Terrain Foliar Fertilizer** with its nitrogen, iron and other nutrients, the lawn continues growing greener, thicker and more lush. The **Duration Wetting Agent** offers the most economical surfactant to assist in water uptake and breaking the surface tension to increase absorption. Plus, **OMRI listed SoilPlex** provides a lasting carbon source with humic and fulvic acids for optimizing nutrient uptake.
